Corian, a DuPont polymer, provides a denser alternative to MDF cabinet panels, allowing for a smaller design that has low resonance and responsive bass.

### Red Hot

Just because speaker systems are built for ears doesn't mean they can't be easy on the eyes. Morel's new modular Octave-Octwin speaker system provides needed stimulus for those who want their home theater to look as good as it sounds. The Octave-Octwin 5.2 bookshelf speaker, featured on the chic Octave stand, boasts a 3-inch aluminum Hexatech voice coil with Morel's External Voice Coil (EVC) technology. It also includes a low-resonance, Accuflex-coated soft-dome tweeter with a vented double-magnet neodymium motor. The Octave Center offers a nominal power handling of 300 watts RMS and has a frequency response of 20 hertz to 30 kilohertz. The Octave Subwoofer is designed to integrate with the Octave-Octwin 5.2 speaker to create a tower speaker with enhanced lower-frequency coverage. The subs have isobaric and port-loading reflex cabinets, and each comes with two 9-inch flat-profile woofers. At \$1,999 per pair for the bookshelf speaker, \$1,699 for the center channel, and \$1,999 per pair for the subwoofers, the Octave-Octwin speaker system puts premiere sound and style within reach of all serious audiophiles. The Octave-Octwin speaker system is available in black, white, and red piano finishes and in an ebony-wooden finish.

The Octave Center is designed to have wide dispersion and optimize accuracy. It sonically matches the Octave-Octwin 5.2 but offers more powerful bass and higher power handling.

The Octave-Octwin 5.2's tweeter is located in a separate pod above the woofer to help prevent dispersion problems.

### premiere points

› Modular design lets you use the bookshelf model individually or combine it with the subwoofer to form an integrated tower
