The Best Component Car Speakers Review

Also Great - The Morel Maximo Series – this is a state of the art series that found its way on this list due to its unmatched build quality and innovative technology. Even though the brand is not as popular as the rest on this list, it certainly stands out as a great upgrade option. Morel Maximo 6.5-inch two-way component system with an external crossover bears the ideal traits for a rear end package – spectacular bass. For front chose Maximo 5.25-inch speakers with huge one-inch soft dome **tweeters with EVC technology** for impeccable acoustics and mids. Unfortunately, the brand only has speakers from 5 inches to 6×9-inches. Also, you can only bump into a two-way Maximo component system. Highly innovative design and exclusive features enhances the series' overall audio quality immensely regardless of whether it is powered by an amplifier or radio. Compared to the great options above, the series is pinned to a pocket-friendly price tag that ranges from \$199.
